

In 1976, Energy Air started as a small air-conditioning company operating in a two-car garage. Just four years later, we expanded the operation to a small warehouse space that doubled as the company's office.

With the team's hard work, loyalty and dedication, our company has developed into a thriving organization.

Energy Air had a vision to become a one-stop, full service firm that integrates every aspect of the client's needs.

From pre-construction planning through fabrication, installation, and ongoing planned maintenance and service, Energy Air can do it all.

OUR MISSION

To be the leader of the HVAC industry in Florida through professionalism, performance, customer service and a commitment to safety, our employees, and community.

**Planned
Maintenance**

Why Planned Maintenance?

- Save money on your utility bill
- Locate minor problems before they turn into major component failures
- Restore equipment capacity
- Increase system efficiency
- Extend system lifespan
- Ensure safe operation
- Reduce humidity levels and improve air quality in your home
- Keep your manufacturer parts guarantee in tact

Save on your heating and cooling costs by hiring a professional to perform maintenance once per cooling & heating season
